Access® Computer Lenses: Vision for the Workplace

Computer Vision Syndrome: A Growing Problem

Over 14% of patients scheduling an eye exam complain of *Computer Vision Syndrome (CVS)*, the complex of eye and vision problems associated with extended computer use.

Standard eyeglasses aren't designed for computer use. They often cause wearers to squint or adjust their heads in an effort to see the monitor, keyboard and objects on the desk. This is especially true of presbyopes.

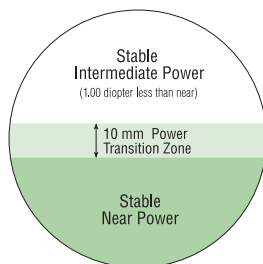

Access® Computer Lenses Provide Clear Vision Out to 7 Feet*

Access® Computer Lenses by SOLA are the ideal solution for computer users. They provide extra-wide near vision through the bottom of the lens, transitioning to extra-wide intermediate vision.* Wearers get a wide, clear, uninterrupted view of their entire work space – from the keyboard and desk, to the monitor and out to to seven feet away.

Easy Adaptation

The wide visual fields and smooth transition zone of Access® Computer Lenses make it easy for patients to adapt quickly. They'll soon find that the eyestrain, headaches and neck pain often associated with computer use have become virtually obsolete.

Ideal for Presbyopes

Access® Computer Lenses are an ideal specialized pair for presbyopes and emerging presbyopes who use computers and wear single vision, progressive or even contact lenses. They're the perfect second pair for workplace vision that really works.

Access® Computer Lenses Availability

- One lens design for left and right
- Low power range (0.75 diopters) for presbyopes with 1.50 Add or less
- High power range (1.25 diopters) for presbyopes with 1.75 Add or greater
- Lab determines lens based on Rx
- Near Rx sphere range of -6.00* to +4.00
- 80 mm polycarbonate and 78 mm hard resin diameters fit virtually all frame designs
- Available in both hard resin and polycarbonate (polycarbonate to +2.00)

* Note: Access® Computer Lenses do not offer a clear view of objects beyond seven feet away. They should never be used while driving or for other activities that require clear distance vision. Mid-range vision will vary depending upon prescription.
